

# Comic Book Filter

This filter will take any image that you give it, and will change it to look more like a comic book drawing. First the image that is provided is turned into a line drawing. This is to add more details to some of the lines in the drawing to give contrast. Next the image has an artify function run against it giving it that comic book feel to it by changing certain colors depending on where their RGP values fall. Finally, a border is added to the picture to make it look like it is part of a comic strip in a book.
